

certiva

Brand system

Certification work, connected from application to decision.

BUILT FOR CERTIFICATION-BODY OPERATIONS

A calm, product-led identity that explains one real workflow at a time, keeps expert judgment visible, and uses evidence before claims.

Guidelines and production assets / v1.0

5 October 2026 / getcertiva.com

What the brand must convey

Software built with certification-body operating detail, without taking professional judgment away from the people responsible for it.

OPERATIONAL

Show the case moving between real roles and records. Explain the handoff that changes, not a feature count.

CALM

Use clarity, space and measured language. Do not borrow urgency, fear or startup hype.

HUMAN-CONTROLLED

AI may assist where implemented. CB staff review, approve and own certification decisions.

EVIDENCE-FIRST

Use current UI and verifiable behavior. No invented metrics, customers or guarantees.

Positioning line

Certification work, connected from application to decision. This is campaign language, not part of the logo. Apply it only where the shown workflow supports it.

Reader outcome

A CB operator should feel that Certiva understands their handoffs, shows the relevant improvement, and respects existing procedures and accreditation responsibility.

A quiet green system

Night and White carry the layout. Green directs attention; it should never overwhelm the information.

ACCESSIBLE PAIRINGS

Forest on White 10.56:1 / Mid on White 6.39:1 / Signal on Night 8.75:1. Never set small text in Signal on White (2.24:1).

Exact artwork. Clear hierarchy.

Use the supplied production SVGs without redrawing. Keep the previous refined mark separate until its original master can be recovered.

certiva

PRIMARY / ON LIGHT

certiva

REVERSED / ON DARK

Logo rule

Clear area: at least one quarter of the 44 px icon width. Minimum lockup width: 120 px digital. One logo per composition. Never stretch, recolor, glow or fuse a tagline into it.

TYPOGRAPHY

A direct headline

A useful explanation follows in Manrope.

EYEBROW / RECORD LABEL

Layout

Use an 8 px spacing base, left-aligned editorial hierarchy and generous margins. Pair one explanation with one real product proof frame. Keep body text out of gradients and busy footage.

Show the work, not a promise

A credible feature asset follows one task from trigger to controlled human outcome.

01

Trigger

What starts the task? Example: an application has been approved.

02

Workflow

What actually moves? Known case fields flow into the prepared audit set.

03

Proof

Show a current UI crop or a clearly labelled conceptual diagram.

04

Human control

The planner reviews the files, downloads the pack and owns the decision.

Publishing control

Capture only real, current, permission-cleared UI. Remove customer names, documents, email addresses, signatures and other sensitive details. A template placeholder must be replaced before publication.

One system, several surfaces

The identity remains consistent while each format respects its own constraints.

SOCIAL

LinkedIn 1200 x 627. Instagram portrait 1080 x 1350, square 1080 x 1080 and story 1080 x 1920. One headline, one proof frame, one logo.

DOCUMENTS

A4 with 20 mm outer margin. Include recipient, actual scope, date/version, legal seller and a specific next step. Never place signatures or seals in a reusable master.

WEB / UI

Use the token files as references. Forest is the accessible action color on light; Signal works on Night. Visible keyboard focus and text-plus-color status are required.

EMAIL

Keep the signature compact: sender, title, Certiva, reply address and website. Test any image logo across clients before relying on it.

Platform-safe story

Keep important content within $x=72..1008$ and $y=220..1640$ on a 1080 x 1920 story. Add the platform link sticker at publishing time rather than relying on tiny static URL text.

Specific. Respectful. Verifiable.

Certiva speaks with certification bodies as peers. It explains the relevant workflow and keeps expert responsibility visible.

SAY

The approved application feeds a prepared audit set. Your planner reviews and downloads the documents.

DO NOT SAY

Revolutionary AI guarantees every audit is compliant and creates every document instantly.

PRE-RELEASE QUALITY GATE

- Current, undistorted logo; correct Certiva name and domain.
- Real UI or an explicitly labelled conceptual diagram.
- Claims supported by current product behavior and evidence.
- One workflow, one outcome, one next action.
- Readable at native size, safe margins and sufficient contrast.
- No confidential customer data, signatures or accreditation implication.

SOURCE STATUS

This v1.0 package uses current website artwork. The previously approved refined mark awaits source recovery from iCloud and must not be approximated.
